Target Details	
Background:	<ul> <li>Synonyms: opioid binding protein/cell adhesion molecule-like, OPCML, OBCAM, OPCM,</li> <li>3732419F12, C230027C17, 2900075015RIK, Al844366, B930023M13RIK, Gm181, IGLON1,</li> <li>MGC99974, OPCM_HUMAN.</li> <li>Background: This gene encodes a member of the IgLON subfamily in the immunoglobulin</li> <li>protein superfamily. The encoded protein is localized in the plasma membrane and may have</li> <li>an accessory role in opioid receptor function. This gene has an ortholog in rat and bovine. The</li> <li>opioid binding-cell adhesion molecule encoded by the rat gene binds opioid alkaloids in the</li> <li>presence of acidic lipids, exhibits selectivity for mu ligands and acts as a GPI-anchored protein.</li> <li>Since the encoded protein is highly conserved in species during evolution, it may have a</li> <li>fundamental role in mammalian systems. Two transcript variants encoding different isoforms</li> <li>have been found for this gene. [provided by RefSeq]</li> </ul>
