Background: Synonyms: B Lymphocyte Activator Macrophage-expressed, SLAMF8, BLAME, FLJ20442, MGC129578, SBBI42.

Background: This gene encodes a member of the CD2 family of cell surface proteins involved in lymphocyte activation. These proteins are characterized by Ig domains. This protein is expressed in lymphoid tissues, and studies of a similar protein in mouse suggest that it may function during B cell lineage commitment. The gene is found in a region of chromosome 1 containing many CD2 genes. [provided by RefSeq].
