re	emodeling associated protein 4, MXRA4.
Ba	ackground: The protein encoded by this gene is a cell-surface glycoprotein and type I
m	nembrane protein that was originally identified as a myeloid cell-specific marker. The encoded
pr	rotein was once thought to be a receptor for C1q, but now is thought to instead be involved in
in	tercellular adhesion and in the clearance of apoptotic cells. The intracellular cytoplasmic tail
of	f this protein has been found to interact with moesin, a protein known to play a role in linking
tra	ansmembrane proteins to the cytoskeleton and in the remodelling of the cytoskeleton.
