|                     | Background: Dectin 2 is a type II transmembrane protein that is a member of the C type lectin     |
|                     | superfamily. In mouse, dectin 2 is predominantly expressed on tissue macrophages and some         |
|                     | dendritic cells. Significant expression of Dectin 2 has been reported on macrophages in the red   |

|                     | lung. Peripheral blood monocytes express low levels of dectin 2 but transient up regulation of    |
|                     | expression has been demonstrated on monocytes at sites of inflammation. The function of           |
