Alternative Name:	ARID2 (ARID2 Products)
Background:	Background: The SWI/SNF-related, matrix-associated, actin-dependent regulators of chromatin
	(SMARC), also called BRG1-associated factors (BAFs), have been identified as components of
	the human SWI/SNF-like chromatin-remodeling protein complexes. SWI/SNF complexes
	possess ATPase and DNA helicase activity that promotes transcriptional activation of genes
	normally repressed by chromatin structure. ARID2 (AT-rich interactive domain-containing
	protein 2) is also known as BAF200 and was purified as a factor that associated with PBAF
	(hSWI/SNF-B). ARID2 is a noncatalytic subunit that is a member of the ARID (AT-rich interactive
	domain-containing protein) family of DNA binding proteins. In addition to the ARID domain,
	ARID2 also contains a C2H2-type zinc finger and has been implicated as a transcriptional co-
	activator for serum response factor for the regulation of cardiac genes.
