Target Details

Background:	Background: SFRS2IP was identified as factor that interacts with SC35, an SR family member
	critical to mRNA splicing. SFRS2IP contains an arginine-serine-rich (RS) domain and lacks any
	known RNA-binding motifs. SFRS2IP may have an important role in splicesome assembly since
	it has been demonstrated to interact with several proteins involved in the early steps of
	splicesome assembly and the finding that splicesomal complexes A and B are not formed in
	SFRS2IP depleted extracts.
