constitute one of the four subunits of the ubiquitin protein ligase complex called SCFs (SKP1-cullin-F-box), which function in phosphorylation-dependent ubiquitination. The F-box proteins are divided into 3 classes: Fbws containing WD-40 domains, Fbls containing leucine-rich repeats, and Fbxs containing either different protein-protein interaction modules or no recognizable motifs. FBXO30 belongs to the Fbxs class and it is upregulated in nasopharyngeal carcinoma [taken from NCBI Entrez Gene (Gene ID: 84085)].
