	interactor of interferon regulatory factor-2 (IRF-2) and called CELTIX1. BRD7 was also identified
	as a binding partner of disheveled-1 (Dvl-1) and found to play a role in Wnt signaling and the
	regulation of glycogen synthase kinase 3-beta activity. Recently, BRD7 was identified as a
	subunit of the polybromo-associated BRG1-associated factor (PBAF) complex and shown to be
	required for the modulation of transcription in embryonic stem cells.
