Target Details

Target:	G3BP2
Alternative Name:	G3BP2 (G3BP2 Products)
Background:	Background: Ras-GAP SH3 domain binding protein (G3BP2) contains an RNA recognition motif

Target Details

(RRM) and an N-terminal nuclear transport factor 2-like (NTF2-like) domain. The G3BP family of proteins have been shown to function downstream of Ras and play a role in RNA metabolism, signal transduction, and proliferation. G3BP2 can interact with IκappaBα and IκappaBα/NFκappaB complexes. In this complex G3B2 is proposed to play a role in regulating the nucleocytoplasmic localization of NFκappaB as well as its activity.
