Background:	Background: Spastic paraplegia 20 protein (SPG20) is a protein containing a MIT (Microtubule

## Target Details

Interacting and Trafficking molecule) domain, and is implicated in regulating endosomal trafficking and mitochondria function. The protein localizes to mitochondria and partially co-localizes with microtubules. Stimulation with epidermal growth factor (EGF) results in protein translocation to the plasma membrane, and the protein functions in the degradation and intracellular trafficking of EGF receptor. Mutations associated with the SPG20 gene cause autosomal recessive spastic paraplegia 20 (Troyer syndrome) [taken from NCBI Entrez Gene (Gene ID: 23111)].
