Target Details

Target:	EIF3G
Alternative Name:	eIF3G/EIF3S4 (EIF3G Products)
Background:	Background: Eukaryotic initiation factor 3 subunit G (eIF3G) is one of at least 13 non-identical

Target Details

protein subunits of eukaryotic initiation factor 3 (eIF3). eIF3 is the largest eIF (~650 kDa) and functions to facilitate binding of the 40S ribosomal subunit to the 5'-end of cellular mRNAs near the cap structure (m7GpppN). eIF3G has been shown to directly interact with AIF (apoptosis inducing factor), a protein that plays a role in caspase-independent apoptosis. AIF is able to inhibit protein synthesis via its interaction with eIF3g.
