Target Details

associated protein of 160 kDa (ARA160), is a potential co-activator of the androgen receptor. TFM1 mediates STAT3 degradation. It also may play critical roles in two RAB6-dependent retrograde transport processes: one from endosomes to the Golgi and the other from the Golgi to the ER. This protein binds the HIV-1 TATA element and inhibits transcriptional activation by the TATA-binding protein (TBP) [taken from the Universal Protein Resource (UniProt) P82094].
