## Target Details

	transcription. The members of the CHD family of proteins possess 3 common structural and
	functional domains: a chromodomain (chromatin organization modifier), an SNF2-like
	helicase/ATPase domain, and a C-terminal DNA-binding domain. CHD7 is implicated to play a
	role in development. Mutations in CHD7 are associated with CHARGE syndrome, a multi-
	symptom syndrome characterized by congenital anomalies and malformations of the heart,
	inner ear, retina, and palate.
