Target Details

Background:	Background: Mediator complex subunit 15 is a component of the Mediator complex, a
	coactivator involved in the regulated transcription of nearly all RNA polymerase II-dependent
	genes. Mediator functions as a bridge to convey information from gene-specific regulatory
	proteins to the basal RNA polymerase II transcription machinery. Mediator is recruited to
	promoters by direct interactions with regulatory proteins and serves as a scaffold for the
	assembly of a functional preinitiation complex with RNA polymerase II and the general
	transcription factors. MED15 is required for cholesterol-dependent gene regulation. It also
	positively regulates the Nodal signaling pathway. [taken from the Universal Protein Resource
