	transcriptional regulation. In addition to its role in snRNP assembly, DDX20 can function as a
	of RNP complexes. Some members of the DEAD box proteins also exhibit functions involved in
	RNA translation, RNA secondary structure formation, ribosome biogenesis, and the assembly
	and function which include pre-mRNA splicing, RNA synthesis, RNA degradation, RNA export,
	helicases. As helicases, DEAD proteins play an important role in all aspects of RNA metabolism
	sequence motif. The major activity of DEAD box proteins is to function as ATP-dependent RNA
	conserved motifs which include the highly conserved DEAD (Asp-Glu-Ala-Asp) amino acid
