Target Details		
Alternative Name:	Raptor (RAPTOR Products)	
Background:	Synonyms: ARaptor phospho S792, Raptor phospho Ser792, p-Raptor Ser792, p150 target of	
	rapamycin TOR scaffold protein containing WD repeats, P150 target of rapamycin TOR-scaffold	
	protein, Regulatory Associated Protein of mTOR, KIAA1303, RPTOR_HUMAN, Regulatory-	
	associated protein of mTOR, p150 target of rapamycin TOR-scaffold protein.	
	Background: mTOR controls cell growth, in part by regulating p70 S6 kinase alpha (p70alpha)	
	and eukaryotic initiation factor 4E binding protein 1 (4EBP1). Raptor is a 150 kDa mTOR binding	
	protein that also binds 4EBP1 and p70alpha. The binding of Raptor to mTOR is necessary for	
	the mTOR-catalyzed phosphorylation of 4EBP1 in vitro, and it strongly enhances the mTOR	
	kinase activity toward p70alpha. Rapamycin or amino acid withdrawal increases, whereas	
	insulin strongly inhibits, the recovery of 4EBP1 and raptor on 7-methyl-GTP Sepharose. Partial	
	inhibition of raptor expression by RNA interference (RNAi) reduces mTOR-catalyzed 4EBP1	
	phosphorylation in vitro. RNAi of C. elegans raptor yields an array of phenotypes that closely	
	resemble those produced by inactivation of Ce-TOR. Thus, raptor is an essential scaffold for the	
	mTOR-catalyzed phosphorylation of 4EBP1 and mediates TOR action in vivo.
