Target Details

Alternative Name:	SHC + (SHC1 Products)	
Background:	Synonyms: SHC, SHCA, SHC-transforming protein 1, SHC-transforming protein 3, SHC-	
	transforming protein A, Src homology 2 domain-containing-transforming protein C1, SH2	
	domain protein C1, SHC1	
	Background: Signaling adapter that couples activated growth factor receptors to signaling	
	pathways. Participates in a signaling cascade initiated by activated KIT and KITLG/SCF.	
	Isoform p46Shc and isoform p52Shc, once phosphorylated, couple activated receptor tyrosine	
	kinases to Ras via the recruitment of the GRB2/SOS complex and are implicated in the	
	cytoplasmic propagation of mitogenic signals. Isoform p46Shc and isoform p52Shc may thus	
	function as initiators of the Ras signaling cascade in various non-neuronal systems. Isoform	
	p66Shc does not mediate Ras activation, but is involved in signal transduction pathways that	
	regulate the cellular response to oxidative stress and life span. Isoform p66Shc acts as a	
	downstream target of the tumor suppressor p53 and is indispensable for the ability of stress-	
	activated p53 to induce elevation of intracellular oxidants, cytochrome c release and apoptosis	
	The expression of isoform p66Shc has been correlated with life span (By similarity).	
	Participates in signaling downstream of the angiopoietin receptor TEK/TIE2, and plays a role in	
	the regulation of endothelial cell migration and sprouting angiogenesis.
