Target Details

Alternative Name:	calcium binding and coiled-coil domain 2 (CALCOCO2 Products)
Background:	Calcium binding and coiled-coil domain 2 , NDP52, The protein encoded by this gene is a subunit of nuclear domain 10 (ND10) bodies. ND10 bodies are nuclear domains appearing immunohistochemically as ten dots per nucleus. They are believed to be associated with the nuclear matrix on the basis of their resistance to nuclease digestion and salt extraction. ND10 proteins are removed from the nucleus by herpes simplex virus-1 infection and may have a role in viral life cycles. [provided by RefSeq]
Molecular Weight:	52 kDa
