Target Details

Target:	DYNC1LI1
Alternative Name:	dynein cytoplasmic 1 light intermediate chain 1 (DYNC1LI1 Products)
Background:	Dynein cytoplasmic 1 light intermediate chain 1 , DLC-A , DNCLI1 , LIC1, Acts as one of several

Target Details

non-catalytic accessory components of the cytoplasmic dynein 1 complex that are thought to be involved in linking dynein to cargos and to adapter proteins that regulate dynein function. Cytoplasmic dynein 1 acts as a motor for the intracellular retrograde motility of vesicles and organelles along microtubules. May play a role in binding dynein to membranous organelles or chromosomes. Probably involved in the microtubule-dependent transport of pericentrin. Is required for progress through the spindle assembly checkpoint. The phosphorylated form appears to be involved in the selective removal of MAD1L1 and MAD1L2 but not BUB1B from kinetochores.
