Target Details

Background:	Misshapen like kinase 1 , B55 , MAP4K6 , MINK , YSK2 , ZC3, This gene encodes a
	serine/threonine kinase belonging to the germinal center kinase (GCK) family. The protein is
	structurally similar to the kinases that are related to NIK and may belong to a distinct subfamily
	of NIK-related kinases within the GCK family. Studies of the mouse homolog indicate an up-
	regulation of expression in the course of postnatal mouse cerebral development and activation
	of the cJun N-terminal kinase (JNK) and the p38 pathways. Alternative splicing occurs at this
	locus and four transcript variants encoding distinct isoforms have been identified. [provided by
