Alternative Name:	leukocyte immunoglobulin like receptor A3 (LILRA3 Products)
Background:	Synonyms: leukocyte immunoglobulin like receptor A3 , CD85E , HM31 , HM43 , ILT-6 , ILT6 , LIR-4 , LIR4 Background: Leukocyte Ig-like receptors (LIRs) are a family of immunoreceptors expressed

Target Details

predominantly on monocytes and B cells and at lower levels on dendritic cells and natural killer (NK) cells. All LIRs in subfamily B have an inhibitory function (see, e.g., LILRB1, MIM 604811). LIRs in subfamily A, with short cytoplasmic domains lacking an immunoreceptor tyrosine-based inhibitory motif (ITIM) and with transmembrane regions containing a charged arginine residue, may initiate stimulatory cascades (see LILRA1, MIM 604810). One member of subfamily A (LILRA3) lacks a transmembrane region and is presumed to be a soluble receptor (Borges et al., 1997 [PubMed 9548455]).[supplied by OMIM]
