

## Datasheet for ABIN7477853 anti-VRN2 antibody

Overview

Quantity:	50 µg
Target:	VRN2
Reactivity:	Wheat
Host:	Mouse
Clonality:	Monoclonal
Conjugate:	This VRN2 antibody is un-conjugated
Application:	ELISA, Western Blotting (WB)

## Product Details

Immunogen:	KLH-conjugated synthetic peptide chosen from Triticum aestivum VRN2 sequence
Cross-Reactivity (Details):	Not reactive in: no confirmed exceptions from predicted reactivity known in the moment
Predicted Reactivity:	Triticum monococcum
Characteristics:	Expected / apparent Molecular Weight of the Antigene: 23.7
	VRN-2 and ZCCT2 full-length proteins were expressed as GST fusion proteins in E. coli and
	purified through GST sepharose columns. The purified VRN-2 andZCCT2 proteins were used to
	test the specificity of the VRN-2 antibody by Western blot analysis. A Western blot experiment
	showed that the VRN-2antibody was able to differentiate VRN-2 from the ZCCT2 protein.
Purification:	affinity purified

Target Details

Target:

VRN2

Target Details		
Alternative Name:	VRN2 (VRN2 Products)	
Background:	Plants with a winter growth habit flower earlier when exposed for several weeks to cold	
	temperatures, a process called vernalization. The wheat vernalization gene VRN-2 is a	
	dominant repressor of flowering that is down-regulated by vernalization. Loss of function of	
	VRN-2, whether by natural mutations or deletions, results in spring lines, which do not require vernalization to flower.	
Molecular Weight:	23.7	
Application Details		
Application Notes:	1: 1000 (WB), 1: 10 000 (ELISA)	
Comment:	there is some non-specific binding in a western blot when using anti-TaVRN2 antibody on	
	nuclear extracts of T. monococcum	
Restrictions:	For Research Use only	
Handling		
Format:	Lyophilized	
Handling Advice:	Please, remember to spin tubes briefly prior to opening them to avoid any losses that might	
	occur from lyophilized material adhering to the cap or sides of the tubes.	
	Once reconstituted make aliquots to avoid repreated freeze-thaw cycles.	
Storage:	-20 °C	
Storage Comment:	store lyophilized/reconstituted at -20°C, once reconstituted make aliquots to avoid repeated	

freeze-thaw cycles. Please, remember to spin tubes briefly prior to opening them to avoid any

losses that might occur from lyophilized material adhering to the cap or sides of the tubes.
