| Comment:       | The yeast protein expression system is the most economical and efficient eukaryotic system         |
|----------------|--|
|                | for secretion and intracellular expression. A protein expressed by the mammalian cell system is    |
|                | of very high-quality and close to the natural protein. But the low expression level, the high cost |
|                | of medium and the culture conditions restrict the promotion of mammalian cell expression           |
|                | systems. The yeast protein expression system serve as a eukaryotic system integrate the            |
|                | advantages of the mammalian cell expression system. A protein expressed by yeast system            |
|                | could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the     |
|                | native protein conformation. It can be used to produce protein material with high added value      |
|                | that is very close to the natural protein. Our proteins produced by yeast expression system has    |
|                | been used as raw materials for downstream preparation of monoclonal antibodies.                    |
| Restrictions:  | For Research Use only  |
| Handling       |  |
| Format:        | Lyophilized  |
| Concentration: | 0.2-2 mg/mL  |
| Buffer:        | Tris-based buffer, 50 % glycerol   |
|                |  |
