Binding Specificity:	AA 1-100		
Reactivity:	Synthetic		
Host:	Rabbit		
Antibody Type:	Recombinant Antibody		
Clonality:	Monoclonal		
Conjugate:	This p21 antibody is un-conjugated		
Application:	Western Blotting (WB), Immunohistochemistry (Formalin-fixed Sections) (IHC (f))		
Product Details			
Immunogen:	Synthetic peptide corresponding to p21 residues within aa1-100 of p21 was used as an immunogen.		
Isotype:	IgG		
Specificity:	This MAb recognizes a 21 kDa protein, identified as the p21WAF1 tumor suppressor protein. This MAb is highly specific to p21 and shows no cross-reaction with other closely related mitotic inhibitors. p21WAF1 is a specific inhibitor of cdk s and a tumor suppressor involved in the pathogenesis of a variety of malignancies. The expression of this gene acts as an inhibitor of the cell cycle during G1 phase and is tightly controlled by the tumor suppressor protein p53.

Protein Array

Image 1. Analysis of Protein Array containing more than 19,000 full-length human proteins using p21-Monospecific Rabbit Recombinant Monoclonal Antibody (CIP1/4377R). Zand S- Score: The Z-score represents the strength of a signal that a monoclonal antibody (MAb) (in combination with a fluorescently-tagged anti-IgG secondary antibody) produces when binding to a particular protein on the HuProtTM array. Z-scores are described in units of standard deviations (SD's) above the mean value of all signals generated on that array. If targets on HuProtTM are arranged in descending order of the Z-score, the S-score is the difference (also in units of SD's) between the Z-score. Sscore therefore represents the relative target specificity of a MAb to its intended target. A MAb is considered to specific to its intended target, if the MAb has an S-score of at least 2.5. For example, if a MAb binds to protein X with a Z-score of 43 and to protein Y with a Z-score of 14, then the S-score for the binding of that MAb to protein X is equal to 29.
