Alternative Name:	CD92 (SLC44A1 Products)
Background:	Solute carrier family 44 member 1,CD92 is a 70 kDa protein with ten transmembrane domains,
	intracellular N and C teminus, and two glycosylated larger extracellular loops. In the C-terminal
	domain, there is an ITIM-like sequence. This protein seems to be a choline transporter
	responsible for delivery of choline into the immune cells, to make it accessible for phospholipid
	synthesis, as well as a regulator of immune cell signaling. It is expressed mainly on human
	peripheral blood monocytes and neutrophils, and several myeloid and T-cell lines. It can also be
	found on mast cells (but not eosinophils), and weakly on peripheral blood lymphocytes,
	fibroblasts, epithelial cells, and endothelial cells.,CTL1, CHTL1, SLC44A1
