Target Details

Background:	<p>Synonyms: ACL, ATP citrate pro-S lyase, ATP citrate synthase, Citrate cleavage enzyme, EC 2.3.3.8, A730098H14RIK, ACLY, ATP CITRATE LYASE, ATPCL, AW538652, Cce, CITRATE LYASE, CLATP, MGC124629.</p> <p>Background: ATP citrate lyase is the primary enzyme responsible for the synthesis of cytosolic acetyl-CoA in many tissues. The enzyme is a tetramer (relative molecular weight approximately 440,000) of apparently identical subunits. It catalyzes the formation of acetyl-CoA and oxaloacetate from citrate and CoA with a concomitant hydrolysis of ATP to ADP and phosphate. The product, acetyl-CoA, serves several important biosynthetic pathways, including lipogenesis and cholesterologenesis. In nervous tissue, ATP citrate-lyase may be involved in the biosynthesis of acetylcholine. Two transcript variants encoding distinct isoforms have been identified for this gene.
