Background:	Synonyms: APCA, BI, Brain calcium channel 1, Brain calcium channel I, Cach4, Cacn3, Cacna1a, Cacnl1a4, Calcium channel alpha 1A subunit, Calcium channel L type alpha 1 polypeptide, Calcium channel L type alpha-1 polypeptide isoform 4, Calcium channel voltage dependent, P/C type alpha 1A subunit, CAV2.1, EA2, FHM, HPCA, MHP, MHP1, RAT brain class A, RBA-I, SCA6, Voltage-dependent P/Q-type calcium channel alpha-1A subunit, Voltage-gated calcium channel alpha subunit Cav2.1, CAC1A_HUMAN.  Background: Cav2.1 is a voltage-sensitive calcium channels (VSCC) which belongs to the calcium channel alpha-1 subunit family. Cav2.1 mediates the entry of calcium ions into excitable cells and is also involved in a variety of calcium-dependent processes, including muscle contraction, hormone or neurotransmitter release, gene expression, cell motility, cell division and cell death. Cav2.1 (isoform alpha-1A) gives rise to P and/or Q-type calcium currents. Voltage-dependent calcium channels are multisubunit complexes, consisting of alpha 1, alpha-2, beta and delta subunits in a 1:1:1:1 ratio. The channel activity is directed by the poreforming and voltage-sensitive alpha-1 subunit. In many cases, this subunit is sufficient to generate voltage-sensitive calcium channel activity. The auxiliary subunits beta and alpha-2/delta linked by a disulfide bridge regulate the channel activity.
