| Target Details Background: | Synonyms: BII, Brain calcium channel II, CAC 1E, CAC1E, CACH 6, CACH6, CACNA1E, Cacnl1 ac CACNL1A6, Calcium channel, L type, alpha 1 polypeptide, isoform 6, calcium channel, R type, Cav 2.3, Cchra 1, Cchra1, Voltage dependent R type calcium channel subunit alpha 1E, Voltage gated calcium channel subunit alpha Cav2.3. Background: Calcium channels mediate the influx of calcium ions into the cell following membrane polarisation. R-type calcium channels such as Cav2.3 belong to the "high voltage- activated" group and are blocked by nickel. The calcium channel consists of a complex of | |
| | alpha-1, alpha-2/delta, beta, and gamma subunits in a 1:1:1:1 ratio. Each of these proteins exists as multiple isoforms, either encoded by different genes or arising from alternative splicing of transcripts. Cav2.3 is an alpha-1 subunit and has 24 transmembrane segments, which form the pore through which ions pass into the cell. Calcium channels containing the Cav2.3 subunit may be involved in the modulation of firing patterns of neurons, which is important for information processing. | |
