## **Target Details**

Target:	EPOR	
Alternative Name:	Erythropoietin R/EPO-R (EPOR Products)	
Background:	Description: This protein is erythropoietin receptor which is a member of the cytokine receptor family. Upon erythropoietin binding, this receptor activates Jak2 tyrosine kinase which activates different intracellular pathways including: Ras/MAP kinase, phosphatidylinositol 3-kinase and STAT transcription factors. The stimulated erythropoietin receptor appears to have a role in erythroid cell survival. Defects in the erythropoietin receptor may produce erythroleukemia and familial erythrocytosis. Dysregulation of this gene may affect the growth of certain tumors. Alternate splicing results in multiple transcript variants.  Name: EPOR,EPO-R	
Gene ID:	2057	
UniProt:	P19235	
Pathways:	JAK-STAT Signaling	
Application Details		
Restrictions:	For Research Use only	
Handling		
Format:	Lyophilized	
Reconstitution:	Centrifuge the vial before opening. Reconstitute to a concentration of 0.1-0.5 mg/mL in sterile distilled water. Avoid votex or vigorously pipetting the protein. For long term storage, it is recommended to add a carrier protein or stablizer (e.g. 0.1 % BSA, 5 % HSA, 10 % FBS or 5 % Trehalose), and aliquot the reconstituted protein solution to minimize free-thaw cycles.	
Buffer:	Lyophilized from a 0.22 µm filtered solution of PBS,0.1 mM EDTA and 0.1 % CHAPS, pH 7.4.	
Storage:	-20 °C,-80 °C	
Storage Comment:	Store the lyophilized protein at -20°C to -80 °C for long term.  After reconstitution, the protein solution is stable at -20 °C for 3 months, at 2-8 °C for up to 1 week.
