## Target Details

Background:	Description: GSTA1 (Glutathione S-Transferase Alpha 1) is a Protein Coding gene. This gene
	encodes a member of a family of enzymes that function to add glutathione to target
	electrophilic compounds. Glutathione S-transferases (GSTs) are involved in the detoxification of
	carcinogens and may be linked to carcinogenesis. As a vital component of GSTs, GSTA1 plays
	an important role in carcinogenesis. GSTA1 expression may be a target molecule in the early
	diagnosis and treatment of lung cancer. Human colonic adenocarcinoma (Caco-2) cells in
	culture undergo spontaneous differentiation into mature enterocytes in association with
	progressive increases in expression of glutathione S-transferase alpha-1 (GSTA1). GSTA1 levels
	may play a role in modulating enterocyte proliferation but do not influence differentiation or
	apoptosis. GSTA1 may play a key role during pregnancy.
	Name: GSTA1,GST-epsilon,GST2,GSTA1-1,GTH1
Gene ID:	2938

Application Details	
Restrictions:	For Research Use only
Handling	
Format:	Lyophilized
Reconstitution:	Centrifuge the vial before opening. Reconstitute to a concentration of 0.1-0.5 mg/mL in sterile
	distilled water. Avoid votex or vigorously pipetting the protein. For long term storage, it is
	recommended to add a carrier protein or stablizer (e.g. 0.1 % BSA, 5 % HSA, 10 % FBS or 5 %
	Trehalose), and aliquot the reconstituted protein solution to minimize free-thaw cycles.
Buffer:	Lyophilized from a 0.22 $\mu m$ filtered solution of PBS, pH 7.4, 5 % trehalose, mannitol and 0.01 %
	Tween80.
Storage:	-20 °C,-80 °C
Storage Comment:	Store the lyophilized protein at -20°C to -80°C for long term. After reconstitution, the protein
	solution is stable at -20°C for 3 months, at 2-8°C for up to 1 week.
