## Target Details

Background:	Synonyms: Irgm, I1, ligp3, Immunity related GTPase family M protein 1, Immunity related
	GTPase family, M, Interferon inducible protein 1, IRGM1, LRG 47, LRG47, IRGM_HUMAN.
	Background: IRGM belongs to a family of interferon-gamma inducible GTPases, belonging to
	the GTPase superfamily, and are selectively induced by IFN-gamma or bacterial
	lipopolysaccharide (LPS) stimulation. IRGM is primarily expressed in all cells derived from B-cell
	lineages, and is highly expressed in macrophages following IFN-gamma stimulation. IRGM has
	been shown to be required for host defences against a broad range of intracellular pathogens.
	Specifically, IRGM deficient mice show defects with intracellular microbial killing, phagosome
	maturation and autophagy. More recently IRGM has been shown to inhibit baseline
	hematopoietic proliferation and is required for a normal hematopoietic stem cell response to
	chemical and infectious stimuli.
Gene ID:	345611
