## Target Details

Target:	ATP5H
Alternative Name:	ATP5H ( <a href="#">ATP5H Products</a> )
Background:	ATP synthase subunit d, also known as ATP5H, is a 161 amino acid protein that belongs to the ATPase d subunit family. ATP5H encodes the d subunit of the F0 complex. ATP5H produces ATP from ADP in the presence of a proton gradient across the membrane, which is generated

## Target Details

by electron transport complexes of the respiratory chain. Localizing to mitochondrial inner membrane, ATP5H exists as two alternatively spliced isoforms and is encoded by a gene that maps to human chromosome 17q25.1. Recombinant human ATP5H protein, fused to His-tag at N-terminus, was expressed in E.coli.
