## Target Details

Target:	FGFR2
Alternative Name:	FGFR-2/KGFR/CD332 (FGFR2 Products)
Background:	Description: The protein is a member of the fibroblast growth factor receptor family, where
	amino acid sequence is highly conserved between members and throughout evolution. FGFR
	family members differ from one another in their ligand affinities and tissue distribution. A full-
	length representative protein consists of an extracellular region, composed of three
	immunoglobulin-like domains, a single hydrophobic membrane-spanning segment and a
	cytoplasmic tyrosine kinase domain. The extracellular portion of the protein interacts with
	fibroblast growth factors, setting in motion a cascade of downstream signals, ultimately
	influencing mitogenesis and differentiation. This particular family member is a high-affinity
	receptor for acidic, basic and/or keratinocyte growth factor, depending on the isoform.
	Mutations in this gene are associated with Crouzon syndrome, Pfeiffer syndrome,
	Craniosynostosis, Apert syndrome, Jackson-Weiss syndrome, Beare-Stevenson cutis gyrata
	syndrome, Saethre-Chotzen syndrome, and syndromic craniosynostosis.

	distilled water. Avoid votex or vigorously pipetting the protein. For long term storage, it is
	recommended to add a carrier protein or stablizer (e.g. 0.1 % BSA, 5 % HSA, 10 % FBS or 5 %
	Trehalose), and aliquot the reconstituted protein solution to minimize free-thaw cycles.
Buffer:	Lyophilized from a 0.22 $\mu$ m filtered solution of PBS, pH 7.4.
Storage:	-20 °C,-80 °C
Storage Comment:	Store the lyophilized protein at -20°C to -80 °C for long term.
	After reconstitution, the protein solution is stable at -20 °C for 3 months, at 2-8 °C for up to 1
	week.
