anti-Prekallikrein antibody (HRP)

()	1/0	r\ /1	014	
()	ve	I V I	-v	V

Quantity:	0.1 mg	
Target:	Prekallikrein (PK)	
Reactivity:	Human	
Host:	Sheep	
Clonality:	Polyclonal	
Conjugate:	This Prekallikrein antibody is conjugated to HRP	
Application:	Western Blotting (WB), Flow Cytometry (FACS), ELISA, Immunoassay (IA)	
Product Details		
Purpose:	Prekallikrein Polyclonal Antibody - Affinity Purified - HRP Conjugated	
Immunogen:	Human active site-blocked kallikrein prepared from plasma	
Immunogen:	Human active site-blocked kallikrein prepared from plasma	
Isotype:	IgG	
Isotype: Specificity:	IgG Human Prekallikrein, PK, Fletcher factor	
Isotype: Specificity: Purification:	IgG Human Prekallikrein, PK, Fletcher factor

Application Notes:	Immunoblot 1 μg/mL, ELISA detecting 2 μg/mL		
Comment:	Affinity-purified IgG are antibodies further purified using immobilized antigen. Affinity-		
	purification is an enrichment process in which whole IgG is passed over a resin to which		
	antigen has been covalently attached. Non-reactive antibodies are washed away and specific		
	antibodies are eluted under conditions that disrupt the antigen-antibody interaction. The result		
	is a very high-purity product with a substantially higher titre than whole IgG. This level of		
	product is intended for applications such as immunoblotting, immunostaining of cells and		
	several types of immunoassays where the higher signal-to-noise ratio achieved with this		
	enriched product is required.		
Restrictions:	For Research Use only		
Handling			
Format:	Liquid		
Reconstitution:	Allow product to warm to room temperature and gently mix before use		
Concentration:	1 mg/mL		
Buffer:	A buffered stabilizer solution containing 50 % (v/v) glycerol		

-20 °C
