Target Details

Target:	FCGR2A
Alternative Name:	CD32a (FCGR2A Products)
Background:	CD32A, FCGR2A, FCGRIIA, FCR2A, FCRIIA, IGFR2A, IGFRIIA
	Background: Low affinity immunoglobulin gamma Fc receptor IIa, also known as Fc γ RIIa or
	CD32a, is a type I integral membrane glycoprotein. CD32a is a member of the immunoglobulin
	superfamily and is expressed on macrophages, monocytes, neutrophils, eosinophils and
	dendritic cells, epithelial cells, platelets and activated CD4+ T cells. CD32a binds monomeric
	IgG with low affinity but is very efficient at binding immune complexes and is involved in
	phagocytosis and clearing of immune complexes. CD32a is structurally composed of two
	extracellular immunoglobulin domains of the C2-type that interact with the IgG Fc domain, a
	transmembrane domain and a short cytoplasmic tail containing the immunoreceptor tyrosine-
	based activation (ITAM) motif. The product provided only contains the extracellular portion of
	CD32a. CD32a has two allotypic variants differing at amino acid position 167, one containing
	histidine (H167) and the other arginine (R167). H167 exhibits a higher affinity to human IgG1
	and IgG2 than the R167 does and is thought to be primarily responsible for the phagocytosis o
	IgG-opsonized bacteria.

Handling	
Reconstitution:	To obtain a final concentration of 1 mg/mL reconstitute 250 µg vials with 250 µL water and 1.0 mg vials with 1.0 mL water. Solubilize for 30 to 60 minutes at room temperature with occasional gentle mixing. Do not vortex.
Concentration:	1 mg/mL
Buffer:	PBS pH 7.2-7.4 (140 mM NaCl, 2.7 mM KCl, 10 mM Na2HPO4, 1.8 mM KH2PO4)
Preservative:	Without preservative
Storage:	RT,4 °C,-20 °C,-80 °C
Storage Comment:	Lyophilized proteins are stable at ambient temperature for at least 2 weeks. If the protein is not to be used immediately then the protein should be stored in lyophilized form at -20 °C for up 12 months. Once the protein has been reconstituted we recommend storage at 4 °C for up to one week. For longer term storage of protein in solution we recommend aliquoting into smaller vials to avoid repeated freeze-thaw cycles and storage at -20 or -80 °C for up to 3 months. To avoid surface adsorption loss and inactivation we strongly recommend that the protein should not be aliquoted in less than 10 µg per vial.
Expiry Date:	12 months
