Datasheet for ABIN7538262 GPR19 Protein

Overview

Quantity:	50 µg
Target:	GPR19
Origin:	Human
Source:	Mammalian Cells
Protein Type:	Synthetic Nanodisc

Product Details

Purpose:	Human GPR19 full length protein-synthetic nanodisc
Characteristics:	Unlike other membrane scaffold protein (MSP) Nanodisc on the market, our synthetic Nanodisc
	can be prepared directly from the cells. The polymers used during this process have a dual
	function. It dissolves the cell membranes, like the detergent, and uses cellular phospholipids to
	form Nanodisc around the membrane proteins. The target protein embedded Nanodiscs can
	then be purified.

Target Details

Target:	GPR19
Alternative Name:	GPR19 (GPR19 Products)
Background:	Orphan receptor.[UniProtKB/Swiss-Prot Function]
Molecular Weight:	The human full length GPR19 protein has a MW of 47.7kDa
UniProt:	Q15760

Application Details

Advantages of Synthetic Nanodiscs:
Highly purified membrane proteins
High solubility in aqueous solutions
High stability
Proteins are in a native membrane environment and remain biologically active
No detergent and can be used for cell-based assays
No MSP backbone proteins
Limitations of Synthetic Nanodiscs:
Intolerant to acids and high concentrations of divalent metal ions
For Research Use only
Lyophilized
Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0).
Normally 5 % - 8 % trehalose is added as protectants before lyophilization.
-20 °C,-80 °C
Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for
use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).
Lyophilized proteins are shipped at ambient temperature.
