MRGPRX3 Protein

Overview

Quantity:	50 μg
Target:	MRGPRX3
Origin:	Human
Source:	Mammalian Cells
Protein Type:	Synthetic Nanodisc

Product Details

Purpose:	Human MRGX3 full length protein-synthetic nanodisc
Characteristics:	Unlike other membrane scaffold protein (MSP) Nanodisc on the market, our synthetic Nanodisc
	can be prepared directly from the cells. The polymers used during this process have a dual
	function. It dissolves the cell membranes, like the detergent, and uses cellular phospholipids to
	form Nanodisc around the membrane proteins. The target protein embedded Nanodiscs can
	then be purified.

Target Details

Target:	MRGPRX3
Alternative Name:	MRGX3 (MRGPRX3 Products)
Background:	This gene encodes a member of the mas-related/sensory neuron specific subfamily of G protein coupled receptors. The encoded protein may be involved in sensory neuron regulation and in the modulation of pain. [provided by RefSeq, Oct 2009]
Molecular Weight:	The human full length MRGX3 protein has a MW of 36.5kDa

Target Details UniProt: Q96LB0 **Application Details** Advantages of Synthetic Nanodiscs: Comment: · Highly purified membrane proteins · High solubility in aqueous solutions · High stability · Proteins are in a native membrane environment and remain biologically active · No detergent and can be used for cell-based assays · No MSP backbone proteins Limitations of Synthetic Nanodiscs: · Intolerant to acids and high concentrations of divalent metal ions Restrictions: For Research Use only Handling Lyophilized Format: Buffer: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0).
