Target Details

Target:	MFAP4
Alternative Name:	MFAP4 (MFAP4 Products)
Background:	This gene encodes a protein with similarity to a bovine microfibril-associated protein. The

Target Details

protein has binding specificities for both collagen and carbohydrate. It is thought to be an extracellular matrix protein which is involved in cell adhesion or intercellular interactions. The gene is located within the Smith-Magenis syndrome region. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Nov 2010]

Molecular Weight: predicted molecular mass of 27.3 kDa after removal of the signal peptide. The apparent molecular mass of MFAP4-His is 35-55 kDa due to glycosylation.
