# Datasheet for ABIN7538451 OR8B8 Protein

#### Overview

| Quantity:     | 50 µg              |
|---------------|--------------------|
| Target:       | OR8B8              |
| Origin:       | Human              |
| Source:       | Mammalian Cells    |
| Protein Type: | Synthetic Nanodisc |

#### **Product Details**

| Purpose:         | Human OR8B8 full length protein-synthetic nanodisc  |
|------------------|---|
| Characteristics: | Unlike other membrane scaffold protein (MSP) Nanodisc on the market, our synthetic Nanodisc       |
|                  | can be prepared directly from the cells. The polymers used during this process have a dual        |
|                  | function. It dissolves the cell membranes, like the detergent, and uses cellular phospholipids to |
|                  | form Nanodisc around the membrane proteins. The target protein embedded Nanodiscs can             |
|                  | then be purified.   |

### Target Details

| Target:           | OR8B8  |
|-------------------|--|
| Alternative Name: | OR8B8 (OR8B8 Products)   |
| Background:       | Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal response |
|                   | that triggers the perception of a smell. The olfactory receptor proteins are members of a large  |
|                   | family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory    |
|                   | receptors share a 7-transmembrane domain structure with many neurotransmitter and                |
|                   | hormone receptors and are responsible for the recognition and G protein-mediated                 |

| Target Details    |  |
|-------------------|--|
|                   | transduction of odorant signals. The olfactory receptor gene family is the largest in the genome. The nomenclature assigned to the olfactory receptor genes and proteins for this organism is independent of other organisms. [provided by RefSeq, Jul 2008] |
| Molecular Weight: | The human full length OR8B8 protein has a MW of 34.5kDa  |
| UniProt:          | Q15620   |

## Application Details

| Comment:         | Advantages of Synthetic Nanodiscs:   |
|------------------|--|
|                  | Highly purified membrane proteins  |
|                  | High solubility in aqueous solutions   |
|                  | High stability   |
|                  | Proteins are in a native membrane environment and remain biologically active                         |
|                  | <ul> <li>No detergent and can be used for cell-based assays</li> </ul>                               |
|                  | No MSP backbone proteins   |
|                  | Limitations of Synthetic Nanodiscs:  |
|                  | Intolerant to acids and high concentrations of divalent metal ions                                   |
| Restrictions:    | For Research Use only  |
| Handling         |  |
| Format:          | Lyophilized  |
| Buffer:          | Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0).               |
|                  | Normally 5 % - 8 % trehalose is added as protectants before lyophilization.                          |
| Storage:         | -20 °C,-80 °C  |
| Storage Comment: | Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for |
|                  | use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).                |
|                  | Lyophilized proteins are shipped at ambient temperature.   |
| Expiry Date:     | 12 months  |
|                  |  |
