Datasheet for ABIN7538490 PTGER1 Protein

Overview

Quantity:	50 µg
Target:	PTGER1
Origin:	Human
Source:	Mammalian Cells
Protein Type:	Synthetic Nanodisc

Product Details

Purpose:	Human PE2R1 full length protein-synthetic nanodisc
Characteristics:	Unlike other membrane scaffold protein (MSP) Nanodisc on the market, our synthetic Nanodisc
	can be prepared directly from the cells. The polymers used during this process have a dual
	function. It dissolves the cell membranes, like the detergent, and uses cellular phospholipids to
	form Nanodisc around the membrane proteins. The target protein embedded Nanodiscs can
	then be purified.

Target Details

Target:	PTGER1
Alternative Name:	PE2R1 (PTGER1 Products)
Background:	The protein encoded by this gene is a member of the G protein-coupled receptor family. This
	protein is one of four receptors identified for prostaglandin E2 (PGE2). Through a
	phosphatidylinositol-calcium second messenger system, G-Q proteins mediate this receptor's
	activity. Knockout studies in mice suggested a role of this receptor in mediating algesia and in
	regulation of blood pressure. Studies in mice also suggested that this gene may mediate

Target Details

	adrenocorticotropic hormone response to bacterial endotoxin. [provided by RefSeq, Jul 2008]
Molecular Weight:	The human full length PE2R1 protein has a MW of 41.8kDa
UniProt:	P34995
Application Datails	
Application Details	
Comment:	Advantages of Synthetic Nanodiscs:

Comment:	Advantages of Synthetic Nanodiscs:
	Highly purified membrane proteins
	High solubility in aqueous solutionsHigh stability
	 Proteins are in a native membrane environment and remain biologically active
	 No detergent and can be used for cell-based assays
	No MSP backbone proteins
	Limitations of Synthetic Nanodiscs:
	Intolerant to acids and high concentrations of divalent metal ions
Restrictions:	For Research Use only
Handling	
Handling Format:	Lyophilized
	Lyophilized Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0).
Format:	
Format:	Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0).
Format: Buffer:	Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5 % - 8 % trehalose is added as protectants before lyophilization.
Format: Buffer: Storage:	Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5 % - 8 % trehalose is added as protectants before lyophilization. -20 °C,-80 °C
Format: Buffer: Storage:	Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0).Normally 5 % - 8 % trehalose is added as protectants before lyophilization20 °C,-80 °CStore at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for
