

# Datasheet for ABIN7538529 **SMO Protein**

Overview

| Quantity:     | 50 µg              |
|---------------|--------------------|
| Target:       | SMO                |
| Origin:       | Human              |
| Source:       | Mammalian Cells    |
| Protein Type: | Synthetic Nanodisc |

#### Product Details

| Purpose:         | Human SMO full length protein-synthetic nanodisc  |
|------------------|---|
| Characteristics: | Unlike other membrane scaffold protein (MSP) Nanodisc on the market, our synthetic Nanodisc       |
|                  | can be prepared directly from the cells. The polymers used during this process have a dual        |
|                  | function. It dissolves the cell membranes, like the detergent, and uses cellular phospholipids to |
|                  | form Nanodisc around the membrane proteins. The target protein embedded Nanodiscs can             |
|                  | then be purified.   |

## Target Details

| Target:           | SMO  |
|-------------------|--|
| Alternative Name: | SMO (SMO Products)   |
| Background:       | The protein encoded by this gene is a G protein-coupled receptor that interacts with the patched protein, a receptor for hedgehog proteins. The encoded protein tranduces signals to other proteins after activation by a hedgehog protein/patched protein complex. [provided by RefSeq, Jul 2010] |
| Molecular Weight: | The human full length SMO protein has a MW of 86.4kDa  |

### Target Details

| UniProt:  | Q99835             |
|-----------|--------------------|
| Pathways: | Hedgehog Signaling |

## Application Details

| Application Details |  |
|---------------------|--|
| Comment:            | Advantages of Synthetic Nanodiscs:   |
|                     | Highly purified membrane proteins  |
|                     | High solubility in aqueous solutions   |
|                     | High stability   |
|                     | Proteins are in a native membrane environment and remain biologically active                         |
|                     | <ul> <li>No detergent and can be used for cell-based assays</li> </ul>                               |
|                     | No MSP backbone proteins   |
|                     | Limitations of Synthetic Nanodiscs:  |
|                     | Intolerant to acids and high concentrations of divalent metal ions                                   |
| Restrictions:       | For Research Use only  |
| Handling            |  |
| Format:             | Lyophilized  |
| Buffer:             | Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0).               |
|                     | Normally 5 % - 8 % trehalose is added as protectants before lyophilization.                          |
| Storage:            | -20 °C,-80 °C  |
| Storage Comment:    | Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for |
|                     | use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).                |
|                     | Lyophilized proteins are shipped at ambient temperature.   |
| Expiry Date:        | 12 months  |
|                     |  |
