

Datasheet for ABIN7538787

**SARS-CoV-2 Membrane-, Envelope-, Nucleoprotein protein-  
VLP**[Go to Product page](#)

## Overview

Quantity:	100 µg
Target:	SARS-CoV-2 Membrane-, Envelope-, Nucleoprotein
Origin:	SARS Coronavirus-2 (SARS-CoV-2)
Source:	HEK-293 Cells
Protein Type:	VLP
Application:	ELISA, Lateral Flow (LF), Nanoparticle Tracking Analysis (NTA), Western Blotting (WB)

## Product Details

Purpose:	VLP of SARS-CoV-2 (M+E+N)
Characteristics:	SARS-CoV-2 virus-like particles (VLP) were produced in HEK cells by co-expression of the membrane-, envelope- and nucleoprotein. The VLPs do not contain the viral genome, cannot replicate and are not infectious.
Purification:	Tangential flow filtration and polyethylene glycol precipitation
Biological Activity Comment:	active

## Target Details

Target:	SARS-CoV-2 Membrane-, Envelope-, Nucleoprotein
Background:	SARS-CoV-2 (Severe acute respiratory syndrome coronavirus type 2) is a coronavirus (genus: Betacoronavirus, subgenus: Sarbecovirus) that was identified as the cause of COVID-19 disease in early 2020.

## Application Details

---

Application Notes: Applications: Immunogenic antigen, antigen for ELISA and Western blot, reference for rapid antigen tests.  
Western blot: 1-10 µg, ELISA: 1-5 µg/mL

---

Comment: Virus-like Particles are multiprotein complexes that resemble a native virus, but lack the genetic information. Therefore, VLPs are safe to handle in numerous fields of applications. For example, VLPs can be applied as antigen in serological assays (e.g. ELISA), or serve as reference material to standardize the performance of different diagnostic tests (e.g. rapid antigen tests or ELISA). Due to the self-adjuvanting properties of VLPs is the most common application of VLPs the use as antigen for immunizations for vaccine development or antibody discovery campaigns.

---

Restrictions: For Research Use only

---

## Handling

---

Format: Liquid

---

Concentration: Lot specific

---

Buffer: PBS

---

Storage: -80 °C

---

Storage Comment: - 80°C

---
