

Datasheet for ABIN7538796 CNTNAP2 Protein (MYC tag)

Overview

| Quantity: | 2 x 100 µg |
|-------------------------------|---|
| Target: | CNTNAP2 |
| Origin: | Human |
| Source: | HEK-293 Cells |
| Protein Type: | cVLP |
| Purification tag / Conjugate: | This CNTNAP2 protein is labelled with MYC tag. |
| Application: | Western Blotting (WB), ELISA |
| Product Details | |
| Purpose: | Set: cVLP of HIV Gag/Pol CASPR2 + control VLP |
| Characteristics: | Chimeric Gag/Pol virus-like particles (cVLP) were produced in HEK cells by co-expression of the |
| | HIV-1 Gag/Pol polyprotein with a membrane bound target protein. The VLPs do not contain the |
| | viral genome, cannot replicate and are not infectious. |
| Purification: | Polyethylene glycol precipitation |
| Components: | Set contains: (ABIN7538799) and (ABIN7538801). |
| Biological Activity Comment: | active |
| Target Details | |
| Taraet: | |

| Target: | CNTNAP2 |
|-------------------|-------------------------------------|
| Alternative Name: | CNTNAP2 / CASPR2 (CNTNAP2 Products) |

Target Details

Background:

| CASPR2 is a member of the neurexin family which functions in the vertebrate nervous system |
|--|
| as cell adhesion molecules and receptors. This protein, like other neurexin proteins, contains |
| epidermal growth factor repeats and laminin G domains. In addition, it includes an F5/8 type C |
| omain,discoidin/neuropilin- and fibrinogen-like domains, thrombospondin N-terminal-like |
| domains and a putative PDZ binding site. This protein is localized at the juxtaparanodes of |
| myelinated axons, and mediates interactions between neurons and glia during nervous system |
| development and is also involved in localization of potassium channels within differentiating |
| axons. HIV (Human Immunodeficiency Virus) is a retrovirus (genus: Lentivirus, family: |
| Retroviridae) that was identified as the cause of AIDS (Acquired Immunodeficiency Syndrome) |
| in the early 1980s. |

Application Details

| Application Notes: | Applications: Immunogenic antigen, antigen for ELISA and Western blot. Western blot: 1-10 μg, ELISA: 1-5 μg/mL |
|--------------------|---|
| Comment: | Virus-like Particles are multiprotein complexes that resemble a native virus, but lack the genetic information. Therefore, VLPs are safe to handle in numerous fields of applications. For example, VLPs can be applied as antigen in serological assays (e.g. ELISA), or serve as reference material to standardize the performance of different diagnostic tests (e.g. rapid antigen tests or ELISA). Due to the self-adjuvanting properties of VLPs is the most common application of VLPs the use as antigen for immunizations for vaccine development or antibody discovery campaigns. |
| Restrictions: | For Research Use only |

Handling

| Format: | Liquid |
|------------------|--------------|
| Concentration: | Lot specific |
| Buffer: | PBS |
| Storage: | -80 °C |
| Storage Comment: | - 80°C |
