Norovirus GII.P16 VP1 protein-VLP[Go to Product page](#)

Overview

Quantity:	100 µg
Target:	Norovirus GII.P16 VP1
Origin:	Norovirus
Source:	HEK-293 Cells
Protein Type:	VLP
Application:	ELISA, Lateral Flow (LF), Western Blotting (WB)

Product Details

Purpose:	VLP of Norovirus GII.P16 (VP1)
Characteristics:	Norovirus-like particles (VLP) were produced in HEK cells by expression of the VP1 protein. The VLPs do not contain the viral genome, cannot replicate and are not infectious.
Purification:	Polyethylene glycol precipitation
Biological Activity Comment:	active

Target Details

Target:	Norovirus GII.P16 VP1
Target Type:	Viral Protein
Background:	Noroviruses (formerly known as Norwalk-like viruses) belong to the Caliciviridae family. Noroviruses are found worldwide and usually cause gastrointestinal illnesses.

Application Details

Application Notes: Applications: Immunogenic antigen, antigen for ELISA and Western blot, reference for rapid antigen tests.
Western blot: 1-10 µg, ELISA: 0,1-1 µg/mL

Comment: Virus-like Particles are multiprotein complexes that resemble a native virus, but lack the genetic information. Therefore, VLPs are safe to handle in numerous fields of applications. For example, VLPs can be applied as antigen in serological assays (e.g. ELISA), or serve as reference material to standardize the performance of different diagnostic tests (e.g. rapid antigen tests or ELISA). Due to the self-adjuvanting properties of VLPs is the most common application of VLPs the use as antigen for immunizations for vaccine development or antibody discovery campaigns.

Restrictions: For Research Use only

Handling

Format: Liquid

Concentration: 1 mg/mL

Buffer: PBS

Storage: -80 °C

Storage Comment: - 80°C
