

## Datasheet for ABIN7539366 ECGF (Crude Extract)

Overview Quantity: 6 mg FGF1 Target: Reactivity: Cow Host: Cow Cell Culture (CC) Application: **Product Details** Human, Mouse (Murine), Pig (Porcine) Cross-Reactivity: Characteristics: Chromosomal location: 5g31 Grade: Cell Culture Grade **Target Details** Target: FGF1 Alternative Name: ECGF (FGF1 Products) Background: Endothelial cell growth factor (ECGF) is an extract of bovine brain containing growth promoting factors for vascular endothelial cells of mammalian origin. ECGF has also been reported to be beneficial as a media supplement for the fusion and growth of hybridoma cells in monoclonal antibody production. Endothelial cell growth factor is prepared using a modification of the method of Maciag, et al. (1979) lyophilized from a sterile solution containing NaCl and streptomycin sulfate. Endothelial cells from human umbilical vein (HUVEC) can be established as primary cultures by traditional methods. The serial propagation of these cells has proved to be difficult. The long-term propagation of these cells in vitro can be achieved with an extract

With ECGF, the FCS requirement can be reduced. Heparin potentiates the mitogenic activity of crude preparations of ECGF. ECGF has also been reported to eliminate the need for feeder cells in the clonal growth of hybridomas and other cell types.

Synonyms: Endothelial cell growth factor (ECGF), Endothelial cell growth supplement (ECGS)

## Application Details

Application Notes:	Optimum concentration for human umbilical vein endothelial cells (HUVEC) range from $\mu$ g/mL,
	optimal concentration with heparin (50 $\mu$ g/mL) is about 12 $\mu$ g/mL.
Comment:	Supplements
Restrictions:	For Research Use only
Handling	
Format:	Lyophilized
Reconstitution:	Reconstitute the contents of the vial in 2 ml of prewarmed (37 °C) sterile PBS or water. Gently
	rotate the vial until the contents are dissolved. This stock solution may be further diluted in
	sterile tissue culture media to obtain the desired working concentrations. It is recommended
	that medium containing diluted product is aseptically filtered prior to use.
Buffer:	water
Storage:	4 °C
Storage Comment:	Also stable at 4 °C for several weeks it is recommended to store the product below 0 °C. After
	reconstitution the product shout be stored in aliquots at -20 °C to -70 °C.
