	1, C-type lectin domain family 4 member H1, Hepatic lectin H1, ASGR1
	Background: Mediates the endocytosis of plasma glycoproteins to which the terminal sialic
	acid residue on their complex carbohydrate moieties has been removed. The receptor
	recognizes terminal galactose and N-acetylgalactosamine units. After ligand binding to the
	receptor, the resulting complex is internalized and transported to a sorting organelle, where
	receptor and ligand are disassociated. The receptor then returns to the cell membrane surface.
