	 Made to order protein - from design to production - by highly experienced protein experts. Protein expressed in mammalien cells and purified in one-step affinity chromatography The optimized expression system ensures reliability for intracellular, secreted and transmembrane proteins. State-of-the-art algorithm used for plasmid design (Gene synthesis).
	This protein is a made-to-order protein and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.
	If you are not interested in a full length protein, please contact us for individual protein fragments.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Target:	CAMK1
Alternative Name:	CAMK1 (CAMK1 Products)
Background:	Calcium/calmodulin-dependent protein kinase type 1 (EC 2.7.11.17) (CaM kinase I) (CaM-KI)
	(CaM kinase I alpha) (CaMKI-alpha),FUNCTION: Calcium/calmodulin-dependent protein kinase
	that operates in the calcium-triggered CaMKK-CaMK1 signaling cascade and, upon calcium
	influx, regulates transcription activators activity, cell cycle, hormone production, cell
	differentiation, actin filament organization and neurite outgrowth. Recognizes the substrate
	consensus sequence [MVLIF]-x-R-x(2)-[ST]-x(3)-[MVLIF]. Regulates axonal extension and growth
	cone motility in hippocampal and cerebellar nerve cells. Upon NMDA receptor-mediated Ca(2+)
	elevation, promotes dendritic growth in hippocampal neurons and is essential in synapses for
	full long-term potentiation (LTP) and ERK2-dependent translational activation. Downstream of
	NMDA receptors, promotes the formation of spines and synapses in hippocampal neurons by
	phosphorylating ARHGEF7/BETAPIX on 'Ser-694', which results in the enhancement of
	ARHGEF7 activity and activation of RAC1. Promotes neuronal differentiation and neurite
	outgrowth by activation and phosphorylation of MARK2 on 'Ser-91', 'Ser-92', 'Ser-93' and 'Ser-
	294'. Promotes nuclear export of HDAC5 and binding to 14-3-3 by phosphorylation of 'Ser-259'

	and 'Ser-498' in the regulation of muscle cell differentiation. Regulates NUMB-mediated
	endocytosis by phosphorylation of NUMB on 'Ser-276' and 'Ser-295'. Involved in the regulation
	of basal and estrogen-stimulated migration of medulloblastoma cells through
	ARHGEF7/BETAPIX phosphorylation (By similarity). Is required for proper activation of cyclin-
	D1/CDK4 complex during G1 progression in diploid fibroblasts. Plays a role in K(+) and ANG2-
	mediated regulation of the aldosterone synthase (CYP11B2) to produce aldosterone in the
	adrenal cortex. Phosphorylates EIF4G3/eIF4GII. In vitro phosphorylates CREB1, ATF1, CFTR,
	MYL9 and SYN1/synapsin I. {ECO:0000250, ECO:0000269 PubMed:11114197,
