Target Details	
Alternative Name:	Girdin (CCDC88A Products)
Background:	Synonyms: APE, APX, APE1, APEN, APEX, HAP1, REF1, DNA-(apurinic or apyrimidinic site) lyase,
	APEX nuclease, Apurinic-apyrimidinic endonuclease 1, AP endonuclease 1, APE-1, REF-1, Redox
	factor-1, APEX1
	Background: Multifunctional protein that plays a central role in the cellular response to oxidative
	stress. The two major activities of APEX1 in DNA repair and redox regulation of transcriptional
	factors. Functions as a apurinic/apyrimidinic (AP) endodeoxyribonuclease in the DNA base
	excision repair (BER) pathway of DNA lesions induced by oxidative and alkylating agents.
	Initiates repair of AP sites in DNA by catalyzing hydrolytic incision of the phosphodiester
	backbone immediately adjacent to the damage, generating a single-strand break with 5'-
	deoxyribose phosphate and 3'-hydroxyl ends. Does also incise at AP sites in the DNA strand of
	DNA/RNA hybrids, single-stranded DNA regions of R-loop structures, and single-stranded RNA
	molecules. Has a 3'-5' exoribonuclease activity on mismatched deoxyribonucleotides at the 3'
	termini of nicked or gapped DNA molecules during short-patch BER. Possesses a DNA 3'
	phosphodiesterase activity capable of removing lesions (such as phosphoglycolate) blocking
	the 3' side of DNA strand breaks. May also play a role in the epigenetic regulation of gene
	expression by participating in DNA demethylation. Acts as a loading factor for POLB onto non-
	incised AP sites in DNA and stimulates the 5'-terminal deoxyribose 5'-phosphate (dRp) excision
	activity of POLB. Plays a role in the protection from granzymes-mediated cellular repair leading
	to cell death. Also involved in the DNA cleavage step of class switch recombination (CSR). On
	the other hand, APEX1 also exerts reversible nuclear redox activity to regulate DNA binding
	affinity and transcriptional activity of transcriptional factors by controlling the redox status of
	their DNA-binding domain, such as the FOS/JUN AP-1 complex after exposure to IR. Involved in
	calcium-dependent down-regulation of parathyroid hormone (PTH) expression by binding to
	negative calcium response elements (nCaREs).
