Characteristics:

Key Benefits:

- Made to order protein - from design to production - by highly experienced protein experts.
- Protein expressed in mammalian cells and purified in one-step affinity chromatography
- The optimized expression system ensures reliability for intracellular, secreted and transmembrane proteins.
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a made-to-order protein and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

If you are not interested in a full length protein, please contact us for individual protein fragments.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

CYP2C39

Alternative Name:

Cyp2c39

Background:

Cytochrome P450 2C39 (EC 1.14.14.1) (CYP11C39),FUNCTION: A cytochrome P450 monooxygenase that primarily catalyzes the epoxidation of 11,12 and 14,15 double bonds of (5Z,8Z,11Z,14Z)-eicosatetraenoic acid (arachidonate) forming 11,12- and 14,15-epoxyeicosatrienoic acids (11,12- and 14,15-EET) regioisomers. Mechanistically, uses molecular oxygen inserting one oxygen atom into a substrate, and reducing the second into a water molecule, with two electrons provided by NADPH via cytochrome P450 reductase (CPR, NADPH--hemoprotein reductase). {ECO:0000269|PubMed:9721182}.
