Target Details

Target:	KIAA1524
Alternative Name:	Cip2a ( <a href="#">KIAA1524 Products</a> )
Background:	Protein CIP2A (Cancerous inhibitor of PP2A) (p90 autoantigen homolog),FUNCTION: Acts as an inhibitor of protein phosphatase PP2A (By similarity). Promotes anchorage-independent cell growth and tumor formation by preventing dephosphorylation of MYC, thereby stabilizing MYC in human malignancies (By similarity). Together with TOPBP1, plays an essential role in the response to genome instability generated by the presence of acentric chromosome fragments derived from shattered chromosomes within micronuclei (By similarity). Micronuclei, which are

frequently found in cancer cells, consist of chromatin surrounded by their own nuclear membrane: following breakdown of the micronuclear envelope, a process associated with chromothripsis, the CIP2A-TOPBP1 complex tethers chromosome fragments during mitosis to ensure clustered segregation of the fragments to a single daughter cell nucleus, facilitating re-ligation with limited chromosome scattering and loss (By similarity).
